1	<i>Nomada goodeniana</i>	Gooden's nomad bee	Is a nest parasite of <i>Andrena nigroaenea</i> (source www.habitas.org.uk)	https://www.bwars.com/bee/apidae/nomada-goodeniana	√	√	√	√			√
2	<i>Nomada flavopicta</i>	Blunthorn nomad		https://www.flickr.com/photos/63075200@N07/sets/72157633441268055					√		
3	<i>Nomada fucata</i>		Parasities the nests of <i>Andrena flavipes</i> (source www.bwars.com)	http://www.bwars.com/index.php?q=bee/apidae/nomada-fucata	√	√	√	√	√		√
4	<i>Nomada lathburiana</i>		Cleptoparasite of <i>Andrena cineraria</i> (source www.bwars.com)	http://www.bwars.com/index.php?q=bee/apidae/nomada-lathburiana	√	√	√	√			√
5	<i>Sphecodes monilicornis</i>	Square-headed blood bee	Attacks the nests of <i>Lasioglossum malachurum</i> (source www.eakringbirds.com)	https://www.flickr.com/photos/63075200@N07/sets/72157638183768695/	√	√	√	√			√
6	<i>Lasioglossum parvulum</i>	Smooth-gastered furrow bee	A putative host of several cleptoparasitic bees, including <i>Sphecodes geoffrellus</i> (Kirby), <i>S. crassus</i> Thomson, <i>S. miniatus</i> von Hagens, <i>S. ephippius</i> (Linnaeus) and <i>Nomada sheppardana</i> (Kirby). Specimens are occasionally collected carrying females of the stylons <i>Halictoxenos</i> . (source www.bwars.com)	https://www.flickr.com/photos/63075200@N07/sets/72157649405511616/	√			√			
7	<i>Andrena fulva/andrena armata</i>	Tawny mining bee	<i>Nomada panzeri</i> Lepelletier and <i>N. signata</i> Jurine are cleptoparasites of this bee (source www.bwars.com). Also attacked by the bee-fly <i>Bombylius major</i> and <i>Leucophora</i> flies (source Steven Falk, Field Guide to Bees or Great Britain and Ireland)	http://www.bwars.com/index.php?q=bee/andrenidae/andrena-fulva&page=1	√	√	√				√
8	<i>Andrena wilkella</i>	Small white-haired bee or Wilke's mining bee	<i>Nomada striata</i> Fabricius is a cleptoparasite of this species (source www.bwars.com)	https://www.flickr.com/photos/63075200@N07/sets/72157639396785955/	√	√	√				
9	<i>Andrena tibialis</i>			http://www.commanster.eu/commanster/Insects/Bees/WBees/Andrena.tibialis.html	√						

No.	Bee	Common name	Comment	Hyperlink to image	1999**	2000*	2006*	2007*	2015***	2018 ¹	2019*
10	<i>Andrena nitida/Andrena pubescens</i>	Grey patched mining bee	It is possible that the cuckoo-bee <i>Nomada goodeniana</i> parasitises this species. It is known to be parasitised by the Strepsipteran <i>Stylops melittae</i> , but this is not very frequent. (source www.bwars.com)	https://www.flickr.com/photos/63075200@N07/sets/72157639922243985/	√	√	√	√			√
11	<i>Andrena cineraria</i>	Ashy mining bee/ Grey mining bee	See <i>Nomada lathburiana</i>	http://www.bwars.com/index.php?q=bee/andrenidae/andrena-cineraria	√	√	√	√			√
12	<i>Andrena flavipes</i>	Yellow legged mining bee	See <i>Nomada fucata</i>	http://www.bwars.com/sites/www.bwars.com/files/info_sheet_s/Andrena_flavipes_infosheet.pdf	√	√	√	√	FV		√
13	<i>Andrena humilis</i>		The cleptoparasitic bee <i>Nomada Integra</i> is specifically associated with this species (source www.bwars.com)	http://www.bwars.com/index.php?q=bee/andrenidae/andrena-humilis	√	√	√	√			√
14	<i>Andrena angustior</i>	Groove faced mining bee		https://www.flickr.com/photos/63075200@N07/sets/72157640599506795/		√		√

77	<i>Colletes hederæ</i>	Ivy bee	Identified by Rupert Higgins	https://www.flickr.com/photos/63075200@N07/sets/72157636022153124/						√	
78	<i>Andrena fuscipes</i>	Heather mining bee	The cuckoo-bee <i>Nomada rufipes</i> Fabricius parasitises this species. (source www.bwars.com)	https://www.bwars.com/bee/andrenidae/andrena-fuscipes							√
79	<i>Andrena nigroaenea</i>	Buffish mining bee	<i>Nomada goodeniana</i> (Kirby) is a cleptoparasite on this species (source www.bwars.com)	https://www.bwars.com/bee/andrenidae/andrena-nigroaenea							√
80	<i>Halictus rubicundus</i>	Orange-legged Furrow-bee	Two cleptoparasitic bees attack this species: <i>Sphecodes gibbus</i> and <i>S. monilicornis</i> . It is also recorded as being attacked by the conopid fly <i>Zodion cinereum</i> (K G V Smith 1969). (Source www.bwars.com)	https://www.bwars.com/bee/halictidae/halictus-rubicundus							√
81	<i>Lasioglossum malachurum</i>	Sharp-collared Furrow-bee	L Packer (pers. comm.) has excavated the cleptoparasite, <i>Sphecodes monilicornis</i> (Kirby) and larvae of the oil beetle <i>Meloe proscarabaeus</i> Linnaeus from nest burrows of this bee on the Isle of Wight. (source www.bwars.com)	https://www.bwars.com/bee/halictidae/lasioglossum-malachurum							√
82	<i>Lasioglossum minutissimum</i>	Least Furrow-bee	The bee <i>Sphecodes longulus</i> von Hagens is a recorded cleptoparasite of <i>Lasioglossum minutissimum</i> . (source www.bwars.com)	https://www.bwars.com/bee/halictidae/lasioglossum-minutissimum							√
83	<i>Sphecodes gibbus</i>	Dark-winged Blood-bee	The larvae are cleptoparasitic on larger bees of the genera <i>Halictus</i> and <i>Lasioglossum</i> . An adult female <i>Sphecodes</i> bee enters the burrow of a host bee and searches out an almost completed cell of the host where it lays its egg. Some female <i>Sphecodes</i> are apparently unique among cleptoparasitic bees in that they remove (eat?) the host egg before laying their own (see, for example, Stephen, Bohart & Torchio, 1969). (source www.bwars.com)	https://www.bwars.com/bee/halictidae/sphecodes-gibbus							√
